

The visualisation is a bar graph showing the loan status (y or n) in different property areas (urban, rural, and semi-urban). The y-axis shows the count and likely represents the number of people who have a loan in that area.

- **Loan Status by Property Area:** It appears that there are more loans overall in urban areas compared to rural and semi-urban areas. This could be due to a number of reasons, such as higher property values in urban areas or a greater availability of loan products.
- **Urban vs. Rural/Semi-Urban:** The graph shows a clear difference in loan status between urban and rural/semi-urban areas. In urban areas, the number of people with loans (both yes and no) is higher than in rural and semi-urban areas.
